STATEMENT OF ORIGINALITY

This undergraduate thesis is my original work and all information contained in this project paper which is derived from the work of others had been given an award by citing the name of the sources author correctly. All the contents of this undergraduate thesis are the responsibility of the author thoroughly.

Name : Khairunnisah

NIM : 1112001044

Signature : 

Date : September 15, 2016

STATEMENT OF APPROVAL

This research proposal is prepared and submitted by:

Name : Khairunnisah
NIM : 1112001044
Study Program : Informatics
Faculty : Engineering and Computer Science
Title : Detection and Classification of Diabetic Retinopathy Stages using Support Vector Machine(SVM) and Artificial Neural Network(ANN)

has been approved by the Board of Examiners and accepted as a partial fulfilment of the requirements to obtain Bachelor of Computer in Informatics Study Program, Faculty of Engineering and Computer Science, Universitas Bakrie.

Board of Examiners,

Thesis Supervisor : Irwan Prasetya Gunawan, Ph.D.

 15/09'16

Examiner I : Yusuf Lestanto ST., M.Sc.

 15/9/16

Examiner II : Berkah I. Santoso ST. M.T.I.

 15/09/16

Authorized in : Jakarta

Date : September 15th 2016

ACKNOWLEDGMENT

Praise be Allah SWT, the Merciful and Gracious, thesis with the title "Detection and Classification of Non-proliferative Diabetic Retinopathy Stages using Support Vector Machine(SVM) and Artificial Neural Network(ANN)" as a graduation condition of undergraduate thesis can be completed. This thesis is submitted as the partial fulfillment of the requirements for the Undergraduate Degree of Informatics at Universitas Bakrie.

There are many people who have helped the author in the research and writing of this final project, either in the form of guidance, advice, and support morally and materially. Therefore, at this moment I would like to express my gratitude and highest appreciation to::

1. Mr. Prof Dr. Hoga Saragih, ST, MT as the Head of Informatics Program Study who always supports, guides and gives his time during thesis progress. He always cheers and calms the author whenever the author faces obstacles and difficulties.
2. Mr. Irwan Prasetya Gunawan, ST, MEng, PhD for his guidance and support during thesis preliminary defense. He was kind enough for supporting me and being cooperative so that I held my preliminary thesis preparation for around two months. He also still guides me until thesis defense
3. Mr. Yusuf Lestanto, ST.,M.Sc. as preliminary thesis examiner who provide advice and improvements to this research.
4. Mr. Berkah I.Santoso who provides advice, suggestion and support in order to continue thesis with the same topic. He has been kind and given the easy guidance during thesis defense.
5. Mr. Iwan Adichandra, MIEE, MIET, MBCS who downloaded thesis papers and gave the accessible link for me to download journal paper for free.
6. My biggest gratitude to my parents for their countless supports and tons of prays. I would never thank them enough. I would also like to thank both my sister Hamidatul Khalifah and my brother Ahlan Firdaus for their supports and prays. Especially for Ahlan who always cheers me up and tells me some jokes. I love them hard.
7. My special thanks to Tessa Hendria Kartika and Mega Silvia Fahriani for the constant reminder in finishing thesis as soon as possible and listening to my tough times related to my thesis.
8. My sincere gratitude to Clarissa Philana Sophia Azaria for all related ebooks about Matlab and her kindness.

9. Last but not least, I would like to extend my gratitude to Ana Ainul Syamsi, Adlan Qowi, Faiz Faidurrahman and Fauzan Al Agung. Ana has given me supports and suggestions during thesis consultation. She also accompanied me working on my thesis. Adlan has offered me help upon my thesis completion. Faiz and Ucang who helped and gave me thesis writing example to follow. You guys rock!

The author believes that this thesis is far from perfect. Therefore, the improvement and further research is still needed. Nevertheless, hopefully this thesis is useful for researchers and others in need.

**STATEMENT OF APPROVAL OF UNDERGRADUATE THESIS FOR
ACADEMIC PURPOSES**

As an academic community of Universitas Bakrie, I who assigned below:

Name : Khairunnisah
NIM : 1112001044
Study Program : Informatics
Type of Thesis : System Design and Analysis

For the development of science, agreed to grant Universitas Bakrie non-exclusive Royalty-Free Rights (non-exclusive, Royalty-Free Rights) for my undergraduate thesis, entitled:

**DETECTION AND CLASSIFICATION OF NON-PROLIFERATIVE DIABETIC
RETINOPATHY STAGES USING SUPPORT VECTOR MACHINE(SVM) AND
ARTIFICIAL NEURAL NETWORK(ANN)**

with the non-exclusive Royalty-Free Rights, Universitas Bakrie is holding rights to keep, avert media/format, manage database, maintain, and publish my final assignment as far as my name as author/creator and owner of Copyright is mentioned.

Detection and Classification of Non-proliferative Diabetic Retinopathy Stages Using Support Vector Machine(SVM) and Artificial Neural Network(ANN)

Khairunnisah

Abstract

Diabetic Retinopathy is the damage of blood vessels which can cause blindness. The detection of diabetic retinopathy is usually carried out by ophthalmologist by analysing fundus photography. In order to get accurate result, the fundus photography can be graded by up to four different ophthalmologists. This standard is highly impossible to achieve in rural areas with the shortage of qualified medical ophthalmologists. Therefore, an automated detection of diabetic retinopathy will be needed in order to ease the burden of ophthalmologist. Furthermore, it can also be used as training module for retinal screeners and graders. This research provides an automated detection and classification of non-proliferative diabetic retinopathy(NPDR). More specifically, this research uses Support Vector Machine(SVM) and Artificial Neural Network(ANN). The classification of diabetic retinopathy is grouped into the respective stage of non-proliferative diabetic retinopathy: normal (No DR detected), mild, and severe.

Keywords : Non-proliferative Diabetic Retinopathy(NPDR), Support Vector Machine(SVM), Artificial Neural Network(ANN), ophthalmologist
